How to Find the HCF and LCM of two numbers?

Q. Find the HCF and LCM of 72 and 120.

Solution:

Use the Common Division Method for finding the HCF and LCM of 72 and 120.

Step 1: Write numbers and their common factor to their left.

Write 72 and 120. The common factor of 72 and 120 is 2.

$$2 \mid \underline{72, 120}$$

Step 1

Step 2: Write the quotients underneath.

The quotient here is 36 and 60 for 72 and 120 respectively.

$$2 \mid \underline{72, 120}$$

$$36, 60$$

Step 2

Step 3: Write their common factors to the left.

As 36 and 60 are not coprime numbers, find their common factor which is 2.

$$2 \mid \underline{72, 120}$$

$$2 \mid \underline{36, 60}$$

Step 3

Step 4: Write the quotients underneath.

The quotient is 18 and 30 for 36 and 60 respectively.

$$\begin{array}{r|l}
 2 & 72, 120 \\
 \hline
 2 & 36, 60 \\
 \hline
 & 18, 30
 \end{array}$$

Step 4

Step 5: Write their common factors to the left.

As 18 and 30 are not coprime numbers, find their common factor which is 2.

$$\begin{array}{r|l}
 2 & 72, 120 \\
 \hline
 2 & 36, 60 \\
 \hline
 2 & 18, 30 \\
 \hline
 &
 \end{array}$$

Step 5

Step 6: Write the quotients underneath.

The quotient here is 9 and 15 for 18 and 30 respectively.

$$\begin{array}{r|l}
 2 & 72, 120 \\
 \hline
 2 & 36, 60 \\
 \hline
 2 & 18, 30 \\
 \hline
 & 9, 15
 \end{array}$$

Step 6

Step 7: Write their common factors to the left.

As 9 and 15 are not coprime numbers, find their common factor which is 3.

2	72, 120
2	36, 60
2	18, 30
3	9, 15

Step 7

Step 8: Write the quotients underneath.

The quotient here is 3 and 5 for 9 and 15 respectively.

2	72, 120
2	36, 60
2	18, 30
3	9, 15
	3, 5

Step 8

Stop here since **3 and 5** are co-prime numbers.

Step 9: Find the LCM.

The product of the numbers in this L shape gives us the LCM of the two numbers.

2	72, 120
2	36, 60
2	18, 30
3	9, 15
	3, 5

Step 9

$$\text{LCM} = 2 \times 2 \times 2 \times 3 \times 3 \times 5 = 360$$

Step 10: Find the HCF.

The product of the factors on the left gives us the HCF

2	72, 120
2	36, 60
2	18, 30
3	9, 15
	3, 5

Step 10

$$\text{HCF} = 2 \times 2 \times 2 \times 3 = 24$$

Summary

What's next?

In our next segment of **Class 10 Maths**, we will find the **HCF and LCM of 2 numbers**.
